

SERVICE TO CELLULAR SITES

We Energies' policy is to provide *one* electric service to each cellular tower site. This service must be sized to accommodate *all* carriers that have space on the tower. We Energies requires that applications for service to cellular towers sites include information on each tower's capacity (i.e. total number of carriers the tower will accommodate). This information is *required* and must be provided *prior to providing service* to the tower site.

I _____, (tower owner/builder/occupant) certify that this facility will accommodate a maximum of _____ carriers. I understand that the service size and number of meter sockets of the original installation must accommodate all future carriers.

I understand that if additional carriers are allowed space on this tower and the size of the service or number of meters sockets need to be increased, I am responsible for increasing the size of the service and/or the number of meter sockets. I also understand that, according to We Energies' policy, additional services are not permitted.
