

Local Code Officials join IREC, We Energies and *Milwaukee Shines* for a workshop on Solar Domestic Hot Water systems code and inspection

Solar water heating is back in vogue and is being installed at an increasing rate due to economics, national and regional policies. This four-hour workshop, made possible by a grant from the U.S. Department of Energy to IREC, provides a comprehensive overview of both indoor and outdoor inspections of domestic solar hot water heating systems found in cold (freezing temperature) environments. The workshop will also include a tour of the We Energies solar hot water system on its roof.
