

Electric Ready for Service Card

Your site is ready for electric service after you complete the following steps:

- 1 Locate, mark or expose any buried obstructions or underground facilities – such as a well or underground yard lighting – with stakes, spray paint or flags.
We Energies and/or its agents will not be held responsible for damage that occurs to customer-owned underground facilities that are not properly located and marked before electric service installation.
- 2 Clear a minimum 10-foot wide path along the service route from the property line to the meter location. Please make sure things like dirt piles and construction materials are not in the way.
- 3 Have the ground around your home and along the service route within 4 inches of final grade.
- 4 We Energies must receive your:
 - Certification of electric inspection from the municipality
 - Signed sketch (if applicable)
 - Payment (if applicable)

Additional charges apply to installations performed Dec. 1 through March 31.

Questions? Refer to your *Residential New Construction Service Application Guide*, we-energies.com, or call your We Energies representative.
