1 INTRODUCTION

1.1 OVERVIEW

This report has been prepared on behalf of We Energies by O'Brien & Gere Engineers, Inc. (OBG), to provide the information required by Title 40 of the Code of Federal Regulations (40 CFR) Part 257.90(e) for the Caledonia Ash Landfill located in Caledonia, Wisconsin.

In accordance with 40 CFR 257.90(e), the owner or operator of an existing coal combustion residual (CCR) unit must prepare an annual groundwater monitoring and corrective action report (Annual Report) for the preceding calendar year. The Annual Report must document the status of the groundwater monitoring and corrective action program for the CCR unit and summarize key actions completed, describe any problems encountered, discuss actions to resolve the problems, and project key activities for the upcoming year. At a minimum, the Annual Report must contain the following information, to the extent available:

- (1) A map, aerial image, or diagram showing the CCR unit and all background (or upgradient) and downgradient monitoring wells, to include the well identification numbers, that are part of the groundwater monitoring program for the CCR unit;
- (2) Identification of any monitoring wells that were installed or decommissioned during the preceding year, along with a narrative description of why those actions were taken;
- (3) In addition to all the monitoring data obtained under 40 CFR 257.90 through 257.98, a summary including the number of groundwater samples that were collected for analysis for each background and downgradient well, the dates the samples were collected, and whether the sample was required by the detection monitoring or assessment monitoring programs;
- (4) A narrative discussion of any transition between monitoring programs (*e.g.*, the date and circumstances for transitioning from detection monitoring to assessment monitoring in addition to identifying the constituent(s) detected at a statistically significant increase over background levels); and
- (5) Other information required to be included in the annual report as specified in 40 CFR 257.90 through 257.98.¹

This report provides the required information for the Caledonia Ash Landfill for calendar year 2017.

1.2 MONITORING AND CORRECTIVE ACTION PROGRAM STATUS

The final three independent samples of the minimum eight required by 40 CFR 257.94(b) were collected and analyzed from each background and downgradient well before October 17, 2017, with the exception of W12D, W49, and W50 as further described in Section 2.2. The other five independent samples were collected and analyzed in 2015 and 2016 for all wells except W49 and W50.

The collection of eight independent background samples was completed by October 17, 2017. The first semi-annual monitoring sample for the Detection Monitoring Program for Appendix III parameters was collected on November 14-15, 2017 from each well; the analytical data was received on December 18, 2017. Determination of statistically significant increases (SSI) of Appendix III parameters over background concentrations will be completed within 90 days of completing the sample analysis, but not later than January 15, 2018.

¹ For calendar year 2017, corrective action and other information required to be included in the annual report as specified in 40 CFR 257.90 through 257.98 is not applicable.

2 KEY ACTIONS COMPLETED IN 2017

2.1 SUMMARY

Three groundwater sampling events were completed in 2017 as part of an effort initiated in 2015 to collect eight independent samples from background and downgradient monitoring wells in accordance with 40 CFR 257.94(b).

Subsequent to collection of the eight independent samples, an additional sampling event was completed in November 2017 for parameters listed in Appendix III, 40 CFR Part 257, to supplement the background data set and as the first semi-annual monitoring sampling event for the Detection Monitoring Program.

A map showing the groundwater monitoring system, including the CCR unit and all background (upgradient) and downgradient monitoring wells with well identification numbers, for the Caledonia Ash Landfill is presented in Figure 1.

Samples were collected and analyzed in accordance with the Sampling and Analysis Plan (Natural Resource Technology, an OBG Company, 2017) prepared for the Caledonia Ash Landfill.

All monitoring data obtained under 40 CFR 257.90 through 257.98 (as applicable) in 2017, as well as monitoring data for the previously collected five independent samples are presented in Tables 1 and 2. Sample collection dates in 2017 were February 8, April 15, August 21-22, and November 14-15. Sample collection dates for previously collected five independent samples are identified in Tables 1 and 2.

Statistical evaluation of analytical data from the eight independent samples required to be collected by October 17, 2017 and the first semi-annual detection monitoring event on November 14-15, 2017 was initiated and will be completed within 90 days of October 17, 2017 (January 15, 2018). Statistical evaluation of analytical data is being performed in accordance with the Statistical Analysis Plan, Caledonia Ash Landfill (Natural Resource Technology, an OBG Company, 2017).

2.2 PROBLEMS ENCOUNTERED AND ACTIONS TO RESOLVE PROBLEMS

Groundwater samples were collected and analyzed in accordance with the Sampling and Analysis Plan, and all data was accepted.

Based on observed fluctuations in groundwater flow direction since 2015, additional monitoring locations were necessary to adequately monitor groundwater downgradient of the Caledonia Ash Landfill. Also, during 2017 site access was improved in areas east-southeast of the landfill, allowing for installation of new groundwater monitoring well W50 closer to the CCR unit and in the same downgradient position as W12D, which had been part of the monitoring network.

New groundwater monitoring wells W49 and W50 were installed from April 18, 2017 to April 19, 2017 and added to the monitoring network to provide additional downgradient groundwater monitoring coverage and groundwater elevation data. In 2017, monitoring well W12D was removed from the monitoring network and replaced by well W50, which provides downgradient coverage east-southeast of the landfill and is located adjacent to the CCR unit. Groundwater monitoring data obtained from well W12D prior to the installation of W50 and during the collection of the eight independent samples from background and downgradient monitoring wells is provided in Tables 1 and 2.

Monitoring well locations are shown on Figure 1.

3 KEY ACTIVITIES PLANNED FOR 2018

3.1 SUMMARY

The following key activities are planned for 2018:

- Continuation of the Detection Monitoring Program with semi-annual sampling scheduled for the 2nd and 4th quarters of 2018.
- Complete evaluation of analytical data from the downgradient wells, using both the eight samples required to be collected by October 17, 2017 and the first semi-annual detection monitoring sample taken in November 2017 to determine whether a SSI of Appendix III parameters over background concentrations has occurred.
- If an SSI is identified, potential alternate sources (*i.e.*, a source other than the CCR unit caused the SSI or that that SSI resulted from error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality) will be evaluated. If an alternate source is demonstrated to be the cause of the SSI, a written demonstration will be completed within 90 days of SSI detection and included in the annual groundwater monitoring and corrective action report for 2018.
 - » If an alternate source(s) is not identified to be the cause of the SSI, the applicable requirements of 40 CFR 257.94 through 257.98 (*e.g.*, assessment monitoring) will apply in 2018, including associated recordkeeping/notifications required by 40 CFR 257.105 through 257.108.
