

January 2020

Environmental information about your electricity

This report provides information about environmental characteristics of the electricity supplied by We Energies. We provide this information to you twice a year as required by the Michigan Public Service Commission (MPSC).

As of Jan. 1, 2017, Upper Michigan Energy Resources Corp. (UMERC) has served as your electric service provider. We Energies supplied electricity to UMERC in 2018.

The information contained in this insert compares 2018 We Energies data on average fuel mix, airborne emissions and high-level nuclear waste with a recent regional average provided by the MPSC.

All utilities in Michigan, as well as alternative energy suppliers serving customers under Michigan Customer Choice, provide this information to their customers.

Average fuel mix comparison	We Energies electric system 2018 actual (expressed in percent)	Five-state regional average fuel mix Aug. 2018 to July 2019 (expressed in percent)
Fuel source		
Coal	45.87	41.81
Nuclear	27.44	26.61
Gas	21.83	23.61
Oil	0.03	0.41
Hydro	1.28	0.76
Renewable fuels total	3.55	6.80
Biofuel	0.03	0.79
Biomass	0.31	0.47
Landfill gas	0.66	--
Solar	<0.01	0.14
Solid waste incineration	<0.01	0.02
Wind	2.52	4.95
Wood	0.01	0.43

The fuel mix data for the electricity supplied to you by We Energies that appears in this table includes regional average fuel mix data from Michigan, Illinois, Indiana, Ohio and Wisconsin as a proxy for the actual fuel mix of certain electricity purchased by We Energies because the actual fuel mix characteristics of that purchased electricity could not be discerned. The unknown resources purchased from other companies accounted for approximately 2.5% of the electricity supplied by We Energies during the relevant period.

Energy you can depend on

We Energies system (%)

Five-state regional average (%)

Airborne emissions and high-level nuclear waste comparison

Emission type	Total We Energies system average (lbs./MWh) ¹ 2018 actual	Five-state regional average for fossil/nuclear generation (lbs./MWh) ² Jan. to Dec. 2017
Sulfur dioxide	0.50	1.92
Carbon dioxide	1,949.10	1,927.00
Oxides of nitrogen	0.78	1.19
High-level nuclear waste ³	0.00	0.006

¹ These rates show the relative amount of air emissions or nuclear waste in pounds per megawatt-hour (MWh) produced as a result of generating electricity from fossil fuel or nuclear units. The emission and nuclear waste characteristics of the electricity you receive vary depending on the mix of fuels used to generate the electricity provided by your electric supplier. Generation split is based on actual 2018 data.

² Regional average in Michigan, Illinois, Indiana, Ohio and Wisconsin. MPSC update Oct. 30, 2019.

³ We Energies has no nuclear generation and, therefore, no emissions associated with high-level nuclear waste.
