

Simple. Smart. Savings.

It's heating up in Wisconsin. And We Energies has some easy tips for cutting energy use and costs around your home this summer.

Summer cooling

- Close your drapes or blinds to keep out the sun's heat.
- Use ceiling or floor fans to cool your home.
- Cook with your microwave rather than a range or oven.

Energy management

- Plug electronics and game consoles into power strips that can be turned off with one switch.
- Use energy-saving settings on computers and TVs.
- If you're not great at turning lights off, use lighting controls both inside and outside your home.
