Cost Forecast	139	189	193	155	140	154	224	280	251	245	229	196	\$2395
Your total energy costs are forecast to increase by 7.6 percent.													

*= Estimated reading x= Cancelled reading (not included in totals)

Important information about your forecasted costs. This energy cost forecast provides estimates based on your previous 12 months of energy use and weather. Your actual bills will differ because of changing energy prices, weather and your actual usage. Your forecast may change month to month due to energy price changes.

- **Months without forecasts:** If you see blanks on your report where forecasts would appear, you may not have that service from We Energies or you may not have had it for a full 12 months. You will only see forecasted dollars for months that you have past energy usage.
- **Budget Billing customers:** Forecasted costs are estimates based on your previous use for electricity and natural gas, not your Budget Bill amount. Use your Budget Bill amount to determine expected payments.
- **Rely-A-Bill customers:** Your natural gas costs remain constant until the end of the current Rely-A-Bill period. Forecasted natural gas costs do not apply to you as long as you remain a Rely-A-Bill customer.
- **Time-of-Use customers:** Forecasted electric costs reflect your overall electric use based on our standard electric rate. We cannot project costs for ON- and OFF-peak use.
- **Energy for Tomorrow customers:** Forecasted electric costs do not reflect any Energy for Tomorrow elections you may have made.
- **Energy Partners customers:** Forecasted electric costs do not reflect electric credits you receive in summer months. Your projected costs may be lower than shown if you remain a participant.
- **Cancelled bills:** If you have cancelled bills within the past 12 months, the forecast for those months will be zero. Energy use and costs will be reflected in the month following a cancelled bill.
